  - Kapittel VII. Generelle krav ved spredning (§§ 19 - 23)
  - Kapittel VIII. Oppbevaring og rester av plantevernmidler (§§ 24 - 25)
  - Kapittel IX. Integreert plantevern (§26)
  - Kapittel X. Organismer til biologisk bekjempelse av planteskadegjørere (§27)
  - Kapittel XI. Avsluttende bestemmelser (§§ 28 - 33)
- Vedlegg
- Forordninger
- Forordninger i pdf

## Same regulation

---

**The Norwegian regulation have no special rules that only apply to golf courses.**

Some important aspects in the regulation:

- Need authorization to buy and use products for professionals.
- Need to keep journal on water protection, integrated plant protection and the plant protection products they use (article 67 1107/2009).
- The area sprayed should be clearly marked by signs for at least 7 days.

# National action plan

---

The national action plan is for the period 2015-2020.

In august this year we will start the planning of a new national action plan. This could be a opportunity to point the direction for future guidance/regulation on PPP use in golf courses and other green areas.

# Control

---

Control on PPP application on golf courses have so far not been a priority, but we do have plans for a control campaign on golf courses. We have had control campaign on other green areas and the results have been mixed.

We have had control with shops marketing products for golf. Some PPPs are disguised as biostimulants/fertilisers. We also see that these shops often have very limited information about the products they sell online. |

In the future new fertiliser regulations both in Norway and the EU will make it easier to stop such products.
